NetCommander

THE MOST VERSATILE MONITOR IN THE WORLD

Is Your Vaccine Management Adequate?

- 24/7 Temperature Monitoring Protection
- Completes Vaccine Temperature Audit Trail
- Immediate Problem Alert
- Mobile SMS Text and E-mail Alarms
- Long Term Temperature Data Traceability
- Empowers Existing Fridges
- Fridge Door Access Alert and Logs
- Standard Speadsheet Support For Graphs
- Up To 16 Fridges Monitored
- Trusted Vaccine Storage

Keeping your valuable biologicals safe…

Thanks to NetCommander's 24/7

Fridge Monitoring and Logging Solution

You can be sure your vaccine storage is trustworthy

The NetCommander Vaccine Monitoring Solution

NetCommander can be added to any dispensary fridge to upgrade your vaccine storage and monitoring capabilities. NetCommander is a cost effective web accessible device for monitoring and logging the vaccine storage conditions within dispensary fridges , such as temperature monitoring and ensuring door closure. NetCommander can empower any Bloodbank, Vaccine storage facility, pharmacy fridge, surgery fridge, pathology lab, specimen storage or dispensary fridge.

Primarily aimed at GP surgeries and dispensaries, NetCommander detects changes in storage conditions before vaccines are damaged. The temperature of up to 16 dispensary fridges, or 8 fridges if door monitors are also included, can be monitored and logged simultaneously.

Autonomous 24hr monitoring ensures that your biologicals are maintained at the correct storage temperature even during the night and weekends. User defined logging intervals and 24hr logging provides a comprehensive temperature and status log for all fridges under NetCommander supervision. Periodic log downloads allow easy validation and auditing of storage facilities, allowing you to complete the audit chain from manufacturer to patient. All logs generated by NetCommander can be imported in to standard spreadsheet applications for graphing and archiving.

Users can access real time temperatures and status logs via their browser, or receive defined alert messages via Windows popup's, e-mail or mobile SMS text messages. For example, if any one of the dispensary fridge doors are left open for more than two minutes an alert can be sent to a designated person. Cameras can be added to the NetCommander solution to add security to restricted access fridges. NetCommander helps you deliver the quality and trust your patients expect.

Technical Specification

Features

24/7 monitoring for up to 16 dispensary fridges
Log temperature every hour
Ethernet attached standalone monitor
Wi-Fi option
No client software required
Powerful web based interface
Real time information and status
Windows, email and SMS text alerts
On board data storage
Graphing
Camera option

Sensors

Temperature	-10-50°C ±0.7°C
Humidity	10-90% ±6%
Door	

NetCommander General

Operating Temp	0 to 40 °C
Humidity	20-80% non-condensing
Power Supply	240v ac
Dimensions	164mm x 104mm x 55mm
Weight	500g approx

CE approved
