

NetCommander

THE MOST VERSATILE MONITOR IN THE WORLD

Key Features

Standalone Controller

IP based standalone monitor and controller with platform independent interface.

Sensors

Monitoring with up to 16 sensors. Huge range of sensors available.

Control Devices

Simultaneous Control of up to 16 devices.

Alarms

On screen and audible Alarms. E-mail alert and mobile phone SMS text alert.

Camera Control

Image capture from multiple cameras, image stored and sent via e-mail.

SNMP

SNMP control from packages such as CISCOWORKS and HP OPENVIEW, Alert traps.

Data Logging

Time and Event based logging with periodic FTP upload, excel compatible.

Timed Events

Date / Time based scheduler for timed events. Including daily and weekly events.

Real-time Data

On Screen Real-time Sensor and Device Readings.

Multiple Users

Simultaneous access to interface. Full Access and View-Only modes.

Scalable Solution

Multiple Netcommanders access via web based master page. Large scale Management system available.

Time Synchronisation

SNTP time services with real-time clock - supports BST

Customisable Event Logic

Advanced internal event system. Fully Adaptable to any application.

Terminal to Serial

Telnet Remote terminal sessions to attached serial device connection.

Serial Device Control

User defined Serial output based on Logic Events.

Wi-Fi Option

802.11g Wireless Interface available.

Steel box Construction

Rugged and EMC protected.

Small Size

165x100x50mm

State of the Art Technology

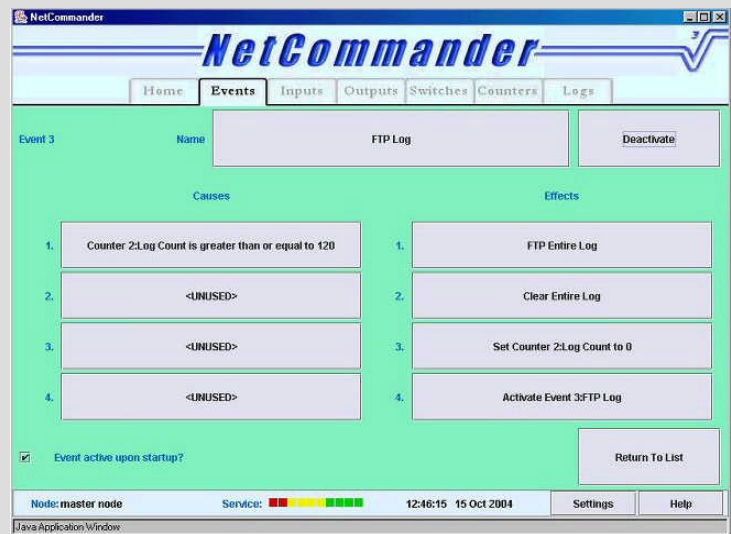

NetCommander is a versatile, standalone home and office controller. Its remote interface allows it to be securely accessed from anywhere in the world, from any machine connected to the web.

It can control your home automation system or industrial requirements, via a wide range of sensors and feature options. Real time information and status is instantly available via a powerful interface and the email and mobile SMS capabilities.

Platform Independent Web-Based Interface

Users can access real time live data and system status securely from anywhere in the world. NetCommander's Internal web server provides both local and secure remote access to the controller. User level access can be full-access or read-only, allowing supervision and administration of critical assets. Alerts can be sent immediately via e-mail and mobile SMS, giving immediate notification of alarm conditions.

At the heart of the flexible software is an advanced event scheduler. It allows the user to manage the causes, the effects, the count of, and the states of up to 32 events and alarms from the various internal functions and external I/O devices. Logic operations can be performed on all events, further enhancing the scheduler flexibility.

For the more important alarms, the user can choose to be alerted using audio, email or SMS. All alarms alerts and events can be logged via the event logger, which time stamps and details each event log as they occur. A 365 day / time scheduler allows the user to trigger events, hourly, daily and weekly.

Runs on Windows, Linux and Mac Operating Systems

Huge Range of Sensors and Devices.

Our Universal daughter boards provide for a wide range of sensors and devices to be interfaced to NetCommander. Such as:

- UPS / HVAC alarm monitoring
- IP Camera support
- Mains switching
- Temperature sensors
- Relative humidity sensors
- Light sensors
- Dual tech Intruder detectors
- Smoke, Heat and Carbon Monoxide sensors
- Liquid level sensors
- Flow sensors (air, liquid)

- Pressure sensors and switches
- Acoustic sensors
- Vibration sensors
- Glass break
- Water leak detectors
- Condensation detectors
- Pneumatic controllers
- Door contacts
- Switches (panic button, pressure mats etc.)
- Servo motors (water valves, window openers etc.)
